PROFILE

Curious and enthusiastic Masters graduate in Communication Technology, eager to explore new technologies, uncover insights from data, continuously learn, and contribute to solving business challenges and driving company growth.

PROJECTS

GitHub Trending Tracker Daywise

- Implemented a web scraper using BeautifulSoup to extract daily trending repository data (name, stars, language) from GitHub's Trending page
- Designed a modular system architecture, directories with YAML-driven configuration to decouple scraper settings, database paths, and plot parameters
- Built a SQLite-backed persistence layer via a custom DatabaseManager class to store and query day-wise trending snapshots
- Optimized data collection by implementing idempotency checks that skip re-scraping when today's data already exists, preventing duplicate records
- Developed a statistical analysis pipeline to compute repository presence frequency across a configurable date range and surface the most consistently trending projects
- Generated automated Matplotlib visualizations of repository trend lines, exported as dated PDF reports to the output folder

DocManager: Intelligent PDF Manager

- Developed a centralized PDF management system with tag and date-based search, eliminating manual file browsing and significantly reducing document retrieval time
- Implemented a clickstream analytics engine tracking 6 user events via SQLite, delivering real-time reading behavior insights through an interactive dashboard
- Built a unique-page-visit progress tracker preventing duplicate inflation, giving users accurate reading completion percentages across all documents
- Secured all database operations with parameterized queries, fully preventing SQL injection across search and data handling workflows
- Optimized in-browser PDF rendering using PyMuPDF page-to-image conversion, removing the need to switch to external applications
- Designed a normalized 3-table SQLite schema with auto-initialization, achieving zero-configuration local deployment out of the box
- Added auto-thumbnail generation from PDF cover pages and password-protected admin controls for secure storage resets

EDUCATION

Aalborg University 2024
MSc in Communication Technology (Network and Distributed System) Aalborg, Denmark

De MontFort University 2021
MSc in International Business Management Copenhagen, Denmark

SKILLS

Languages : Python (Pandas, Numpy, Matplotlib, Seaborn, Scipy), SQL (MySQL, SQLite), Power BI
Tools : VSCode, GitHub
